

Our EnergyMiser Air Scrubber™ removes 98% of Viruses, Mold, Bacteria and Odors from the air!

Provides a 99% Reduction of Bacteria

Provides a 99% Reduction of Viruses

Provides a 97% Reduction in Mold Spores

Reduces Gases & Odors by 85%

Kitchen counter top bacteria after 4 hours in normal air

Kitchen counter top bacteria after 4 hours of treated air

The Problem With Indoor Air.

Indoor air pollution is considered by the EPA to be America's No. 1 environmental health problem. Tightly sealed homes may be more energy efficient, but they also trap pollutants and microbes indoors causing allergies, odors, mold and illness.

Now Brothers has a solution. The EnergyMiser™ Air-Scrubber purification system is a three-stage process that has proven to drastically reduce odors, smoke, mold, fungi, chemical odors and bacteria found on surfaces in the air and your home. Airborne bacteria and mold reduction has been tested at over 90%!

MERV-16* Air Filter rated Best Buy by Consumer Reports

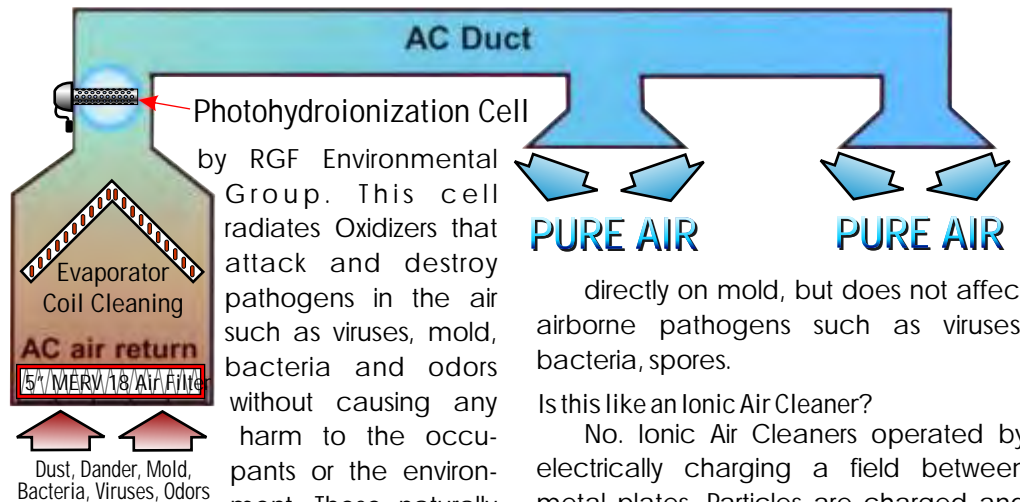

How does it work?
Step 1: We install a super-high efficient 5" thick, MERV-16* Air Filtration Unit, rated "Best Buy" by Consumer Reports, to remove airborne particles such as pollen, animal dander and household dust, from the air stream.

Step 2: We will do an intense cleaning of your Evaporator Coil and Pan to remove any algae, mold or slime buildup.

Evaporator Coil

Step 3: We install the Air-Scrubber PHI Cell or Photohydroionization Cell manufactured and tested

by RGF Environmental Group. This cell radiates Oxidizers that attack and destroy pathogens in the air such as viruses, mold, bacteria and odors without causing any harm to the occupants or the environment. These naturally friendly oxidizers such as Hydroxides, Hydro-peroxides, Ozonide Ions and Super Oxide Ions, then breaks themselves down into harmless oxygen & hydrogen. The system doesn't create any chemicals that remain in the air and it's completely harmless. The PHI Cell is installed in the duct work of your air-conditioner and is completely out of sight. Since the air in your home is exchanged every four hours, the unit completely scrubs the air to eliminate 98% of viruses, mold, bacteria and odors. Isn't this just like those UV Lights?

No. Ultra Violet light is used when mold is discovered on an air-conditioner coil. UV light is effective only when shining

Photohydroionization Cell

directly on mold, but does not affect airborne pathogens such as viruses, bacteria, spores.

Is this like an Ionic Air Cleaner?
No. Ionic Air Cleaners operated by electrically charging a field between metal plates. Particles are charged and attracted to a collection grid which must be cleaned on a regular schedule. Ionic cleaners only remove particles, not bacteria, viruses or mold.

How will I know the PHI Cell is working?

You can smell the difference. In a test at a nursing home in Aiken, SC, where they had 34 elderly patients in diapers, this technology completely eliminated the odor within 48 hours of installation.

This product is approved by the USDA for food purification and approved by the Chinese Government as the only device which provides protection against the SARS Virus. Why risk getting sick?

Our EnergyMiser Open Window™ Brings in Fresh Pure Air Without Heating or Cooling Loss!

Remember how nice it is to open a window in the spring or fall and let in all of that fresh air? Don't you wish you could bring in that same fresh air during the winter or summer without losing your all of your heat or air conditioning?

Well now you can!

EnergyMiser™ now offers a new product that can help you solve the problem of fresh air through an in-house ventilation system. It's called the EnergyMiser Open Window™ Energy Recovery Ventilator and it brings fresh outside air into the house while expelling the stale polluted air without losing your heating or cooling energy to the outside.

How does it work?

The EnergyMiser Open Window™ Energy Recovery Ventilator is a complete whole house ventilation system that incorporates a supply motor and an exhaust motor in one unit. The supply motor draws fresh air in from the outside and the exhaust motor pushes stale contaminated air out. The two air streams are separated by a heat/energy recovery core which tempers the air, making it the most comfortable solution for a healthy indoor environment.

EnergyMiser Open Window™ Energy Recovery Ventilators

Our Open Window system is designed to bring a continuous supply of fresh air into a home while exhausting an equal amount of contaminated air. We use what is called a "sensible" energy recovery core. The enthalpic core at the center of the unit transfers heat and moisture from the incoming air to the outgoing air. The air brought into the living area is cooled and the humidity is reduced for maximum comfort. The load on your furnace or air conditioner is less and you save on energy costs.

EnergyMiser Open Window™ Benefits

The EnergyMiser Open Window™ is installed into your existing duct system and requires only simple maintenance and cleaning

Fresh Air to rooms via Furnace Duct

Exhaust Air From House via Furnace Duct

- Brings a continuous supply of fresh, filtered outside air into the home
- Exhausts environmental contaminants for improved indoor air quality
- Saves energy by recovering heat from exhaust air in the winter
- Controls excess humidity
